

ILLUSTRATIONS FOR SHARPS CORNER QUADRANGLE

Figure 1. Mahtowakpa Paha, camera facing S 45° E. This photograph was taken from the approximate spot as the photograph used as figure 7 of Osborn (1918). The same names used by Osborn have been added to show the geological interpretations of this area at that time. Photo by J. C. Harksen.

Figure 2. This is the same photograph as used in figure 1. The symbols show the current geological interpretation of this area: Tms - Sharps; Tmmc - Monroe Creek; Tmh - Harrison. The strata in the foreground is a portion of the siliceously cemented facies of the Arikaree Group. Photo by J. C. Harksen.

Figure 3. The "Gieser Geyser", a fossil geyser found in the Monroe Creek Formation. Photo by J. R. Macdonald.
